Substitute Claims

1-6. (canceled)

7. (currently amended) A method of providing electronic mail notification to a calling communications device, comprising:

formulating a user specific retrieval profile designating a message delivery format and user specified pre-designated information relating to a for said calling communication device;

associating an email with a first phone number, said email comprising said user specified pre-designated information associated with call related information relating to of said calling communications device;

receiving a call from said calling communications device; and

detecting a caller ID of said call from said calling communication device;

in response to detecting said caller ID, using call said related information from said call to automatically identify and provide fetching and providing said email to said calling communications device after said calling communications device calls a first phone number to said calling communication device according to said retrieval profile;
and

~~without answering terminating~~ said call to said first phone number from said calling communications device before answering.

8. (Currently Amended) The method of providing electronic mail notification to a calling communications device according to claim 7, further comprising:

obtaining a communications device identifier when said calling communications device dials said first phone number; and

using said communications device identifier to select ~~said~~ an electronic mail message.

9-25. (canceled)

Serial No. 09/852,848,
January 8, 2010

26. (currently amended) A method of retrieving information by a first device from a second device, comprising:

formulating and storing a user specified retrieval profile designating a message delivery format and user specified pre-designated information relating to a first calling device;

receiving said call from said first calling device associated with a said first telephone number intended for a second device associated with a second telephone number;

associating said user specified pre-designated information with call related information relating to of said first calling device;

detecting at said second device a caller ID of said call from said first calling device;

using said call related information to in response to detecting said caller ID at said second device, automatically retrieve retrieving said user specified pre-designated information in response to said call from said first calling device without a need for said second device to answer;

at said second device, terminating said call from said first calling device before answering; and

transmitting said retrieved user specified pre-designated information to said first calling device according to said retrieval profile.

27. (currently amended) The method of retrieving information by a first device from a second device according to claim 26, further comprising:

transmitting converting, if necessary, said retrieved user specified pre-designated information in to a short message and transmitting said short message to said first calling device.

28. (previously presented) The method of retrieving information by a first device from a second device according to claim 26, further comprising:

Serial No. 09/852,848,
January 8, 2010

determining said first telephone number from said call related information associated with said call to said second telephone number by said first calling device.

29. (currently amended) The ~~system for~~ method of allowing a first device to retrieve information from a second device according to claim 26, wherein:
said call related information is caller ID.

30. (currently amended) A system for retrieving information by a first device from a second device, comprising:

means for formulating and storing a user specific retrieval profile designating a message delivery format and user specified pre-designated information related to a first calling device;

means for receiving a call from said first calling device associated with a first telephone number ~~at~~ intended for a second device associated with a second telephone number;

means for associating user specified pre-designated information with call related information relating to said first calling device;

means associated with said second device for detecting a caller ID of said call from said first calling device;

means for automatically retrieving said user specified pre-designated information using said call related information in response to said call from said calling first device ~~without a need for said second device to answer said call from said first calling device; and~~

means associated with said second device for terminating said call from the first calling device before answering; and

means for transmitting said retrieved user specified pre-designated information to said first calling device according to said retrieval profile.

31. (currently amended) The system for retrieving information by a first device from a second device according to claim 30, further comprising:

Serial No. 09/852,848,
January 8, 2010

means for ~~transmitting~~ converting said retrieved user specified pre-designated ~~desired~~ information ~~in~~ to a short message and transmitting said short message to said first calling device.

32. (previously presented) The system for retrieving information by a first device from a second device according to claim 30, further comprising:

means for determining said first telephone number from call related information associated with said call to said second telephone number by said first calling device.

33. (previously presented) The system for allowing a first device to retrieve information from a second device according to claim 30, wherein:

said call related information is caller ID.
